Error: `DKNode_Ingredient: Order run timeout for ingredient qc-testig-generic`

Reason: more tests; more data; fresh data (no cache); slower server; other qc tests at the same time.

Solution: Tab "Configuration" → Execution Settings → Increase Timeout Duration

Error: `(500310) Invalid operation: Value too long for character type`

Reason: The value passing to the function/procedure is bigger than acceptable according to the data type of the parameter.

Solution: change data type (increase the number of allowed chars)

Note: *If function/procedure gets updated in DataGrip, all char data types of parameters turn to text data type. Text data type means varchar(256). **Tip:** recreate function/procedure, avoid function/procedure updates in DataGrip*
