There is a graph **graph-qc-framework** in the recipe **log** at the kitchen **reporting** that allows to process QC test results. Available actions are *warn*, *stop*, *email*, and *wiki*. Each table with procedure parameters has a column **test_action** that identifies a list of actions on the test-level. The table **test_groups** has the same column that identifies a list of actions on the group-level. In order to skip the action on any level, there are actions *noaction*, *nowarn*, *nostop*, *noemail*, and *nowiki*. **Noaction** allows to skip all kinds of actions. The table **test_groups** has additional parameters to run the action such as *email_list*, *wiki_link* and so on.

QC Actions

- warn
- stop
- email
- email_except - sends emails if fails were occurred
- wiki
- except - changes the test status from "Fail" to "Exception" (applies in tables <test type>_test_set)
- noaction
- nowarn
- nostop
- noemail
- nowiki
